

Research workbook

2023

FRANCE

Contributors

Maitena Milhet, Isabelle Michot (OFDT)

2023 National report (2022 data) to the EMCDDA by the French Reitox National Focal Point

Supervision: Guillaume Airagnes

Coordination and editorial: Esther Thiry

Contribution to the workbooks

1. *Drug policy*: Cristina Díaz Gómez
2. *Legal framework*: Margaux Blanchon, Caroline Protais
3. *Drugs*: Olivier Le Nézet, Sabrina Cherki, Clément Gérôme, Eric Janssen
4. *Prevention*: Carine Mutatayi
6. *Best practice*: Carine Mutatayi
8. *Drug market and crime*: Ivana Obradovic, Michel Gandilhon, Caroline Protais, Sabrina Cherki
9. *Prison*: Julien Morel d'Arleux, Caroline Protais, Melchior Simioni
10. *Research*: Maitena Milhet, Isabelle Michot

Proofreading (French version): Julien Morel d'Arleux, Nicolas Prisse, president of the Interministerial Mission for Combating Drugs and Addictive Behaviours, and the project managers of the MILDECA.

Proofreading (English version): Anne de l'Eprevier

Bibliographic references: Isabelle Michot

Legal references: Margaux Blanchon, Anne de l'Eprevier

Table of contents

T0.	Summary	3
T1.	Drug-related research.....	4

T3.	New developments	8
T4.	Additional information	26
T5.	Sources and methodology.....	26

T0. Summary

Please provide an abstract of this workbook (target: 500 words) under the following headings: National profile. In this section please summarise the most relevant information included in the following sections, namely:

- A description of national profiles:
 - main entities financing research on drugs;
 - main research institutions involved in the research on drugs;
 - if applicable, the role of the national drug observatory in the implementation, execution or coordination of drug-related research activities;
 - main national or regional scientific journals publishing drug related research and
 - main drug-related research projects, (planned or ongoing)
- A description of research priorities (if available)
 - drug-related priorities defined in national/regional drug policy;
 - the role of drug-related research in national drug policy documents;
 - new topics emerging in drug-related research in your country (either in governmental or non-governmental research)

National profile

In France, the Ministry of National Higher Education, Research and Innovation (MENESR) designs, coordinates and implements national policy on research and innovation. Two primary academic organisations, the National Centre for Scientific Research (CNRS) and the National Institute for Health and Medical Research (INSERM), cover a wide range of research areas, from neurosciences, through public health and clinical research to social sciences.

The French National Focal Point (OFDT) is the main body involved in drug-related data collection, studies and network development. It collaborates extensively with national and European drug-related research teams. Dissemination of data and research results are also part of its mandate, together with publishing in national and international scientific journals, and promoting the use of research results in practice and policymaking.

The Interministerial Mission for Combating Drugs and Addictive Behaviours (MILDECA) is the central structure close to the Prime Minister responsible for coordinating governmental action in the drugs field. Part of its role is to promote and fund drug-related research. Through its interministerial position and its collaboration with the OFDT and other partners, MILDECA plays a major role in the transfer of knowledge to decision-makers, professionals and citizens in France. MILDECA uses its own appropriations (Finance Act/drugs fund) to support research of a particularly strategic nature for steering public policies on drugs and addictive behaviour.

New development

In 2022, the national anti-addiction plan in force since 2018 expired. On 9 March 2023, the Government adopted its new [Inter-ministerial Strategy for Mobilisation against Addictive Behaviours](#) (SIMCA) to be deployed over 4 years (2023-2027) (MILDECA 2023).

In line with previous government plans, the development of observation and research on addictions constitutes one of the 10 strategic areas retained in this strategy. The public authorities are reaffirming their desire to base public action on solid knowledge. They are committed to supporting and directing the production of scientific data, which can easily be used by the public authorities.

Government guidelines aim to 1/ consolidate observation systems, 2/ continue to structure research and 3/ promote the evaluation of systems and policies.

Among the research priorities, the strategy stresses the importance of clinical research aimed at developing effective drug treatments, in particular with regard to addictions for which there are no substitute products (cocaine).

At the same time, particular attention is paid to the development of research on the illicit supply of narcotics.

The public authorities also underline their desire to promote evaluative research on subjects that have received little attention such as the quality, effectiveness and efficiency of health and medico-social care as well as penal responses to the use of psychoactive products.

T1. Drug-related research¹

The purpose of this section is to

- Describe the organization of drug-related research in your country
- Provide a summary of specific resources on drug-related research available in your country
- Update the available information already provided to the EMCDDA (workbook will be pre-filled).

T1.1. Please update the main drug-related research institutions/associations/bodies (public or private) in your country. Please provide links, also to pages in English, if available.

T1.2. Please update the main institutions/associations/bodies/programmes (public or private) funding drug-related research in your country.
Please provide links, also to pages in English, if available.

- The Fund for Combating Addiction (FLCA) is the main funding source for research on drugs and addictive behaviours in France. It was created within the *Caisse Nationale de l'Assurance Maladie* [National Health Insurance Fund] by the [law no. 2021-1754 of 23 December 2021](#) on the financing of social security for 2022. It succeeds the "fonds de lutte contre les addictions liées aux substances psychoactives" [Fund for Combatting Addiction to psychoactive substances] (set up in 2019 by [law no. 2018-1203 of 22 December 2018](#)), which itself replaced the "fonds de lutte contre le tabac" [Fund for Combatting Tobacco] (set up in 2017 by [decree no. 2016-1671 of 5 December 2016](#)). This modified, among other things, the volume and distribution of resources dedicated to research, with a substantial annual sum earmarked to "support knowledge sharing, innovation, applied research and the evaluation of prevention and care actions".
- The Interministerial Mission for Combating Drugs and Addictive Behaviours (MILDECA: <http://www.drogues.gouv.fr/>) is the central structure responsible to the Prime Minister for coordinating governmental action in the drugs field. Part of his role is to promote and fund drug related research. In line with the National Drug Action Plan 2018-2022, the MILDECA supported new annual [calls for proposals](#) and extended collaborations with research organizations/universities and with the ANR. It also promoted clinical research networks and dissemination initiatives towards the scientific community and policy makers. Measure 6 of the national anti-narcotics plan adopted in September 2019 (Ministère de la Justice *et al.* 2019), provides for updated studies analysing the evolution of use and the impact of drug trafficking on the functioning of society in conjunction with the MILDECA 'because curbing the influence of drugs in certain regions is complex'.
- The Ministry of Higher Education, Research and Innovation (MESRI: <https://www.enseignementsup-recherche.gouv.fr/>) designs, coordinates and implements national policy on research and innovation. A large scope of research areas ranging from neurosciences, through public health and clinical research to social sciences is mainly covered by two major academic operators: the National Centre for Scientific Research (CNRS) and the National Institute for Health and Medical Research (INSERM).
- The French Research Agency (*Agence Nationale de la Recherche* – ANR: <http://www.agence-nationale-recherche.fr/en/project-based-funding-to-advance-french-research/>) is in charge of programming national research and innovation. The agency establishes the thematic priorities of research and allocates the resources. Every year, the agency launches calls for tenders covering a large spectrum of scientific areas.

- The Ministry of Health and Prevention (MSP: <https://solidarites-sante.gouv.fr/>) funds, in specific years, clinical projects on addiction treatment in hospitals (under the programme “*Programme Hospitalier de Recherche Clinique*” - PHRC). It also funds studies on specific populations of drug users, interventions (prevention, treatment, harm reduction) or legal disposition.
- The National Research Agency on AIDS (*Agence Nationale de Recherche sur le Sida* – ANRS: <https://www.anrs.fr/>) and the French Public Health Agency (*Santé publique France*: <https://www.santepubliquefrance.fr/>) implement regular surveys and research projects, notably on the links between injecting drug use and infectious diseases (mainly HIV and HCV). Under the supervision of the MESRI (Ministry of Higher Education, Research and Innovation) and the MSP (Ministry of Health and Prevention), the ANRS also brings together an inter-institutional network of national and international doctors and researchers, patient associations and representatives of civil society, working together to define and implement projects. SPF's research and expertise work on addictions is carried out within the framework of two units of the agency, one being dedicated to infectious diseases and the other devoted to prevention and health promotion.
- The French National Cancer Institute (*Institut national du cancer* – INCa: <http://en.e-cancer.fr/>) is the preeminent health and science agency in charge of cancer control in France, created in 2004. It reports to the ministries for Health and for Research. About half of its budget (€100 million) is allocated to research funding. Each year, the Institute organises more than fifteen competitive calls for proposals in the areas of research, public health, cancer care organisation and patient information.
- The Institute for Public Health Research (*Institut de Recherche en Santé Publique GIS-IreSP*, <http://www.iresp.net/>) helps support and facilitate research into psychoactive substance use and addiction through a funding mechanism composed of calls for research proposals, calls for applications for PhD grants, calls for support actions. It is financed by the Fund for Combating Addiction.
- Regional health agencies (*Agences regionales de santé* - ARS) implement national health policy at local level. The regional roadmaps drawn up for this purpose may include budgets for addiction research projects.
- NGOs and foundations (such as the *Fondation de France*) representing practitioners, users and companies (alcohol suppliers, tobacco industry and pharmaceutical laboratories) also regularly fund surveys and research project in these areas.

T1.3. Please update the list of the main national scientific journals where drug-related research is published in your country. Please provide links, also to pages in English, if available.

- T1.4. Please update the list of drug-related research relevant websites/resources you would like us to include in your research country profile. Provide links, also to pages in English, if available.

T2. Trends (Not applicable for this workbook)

T3. New developments

The purpose of this section is to provide information on any notable or topical developments observed in drug-related research in your country **since your last report**.

T1 is used to establish the baseline of the topic in your country. Please focus on any new developments here. If information on recent notable developments have been included as part of the baseline information for your country, please make reference to that section here. It is not necessary to repeat the information.

- T3.1. Please update the list of the main drug-related, recent/on-going since your last report studies/research projects in your country. Please provide links, also to pages in English, if available. If possible, classify each study/research project under one of the following categories:
- (1) Basic biological, neurobiological and behavioural research (including aetiological and addictive behaviour research);

- (2) Population based and clinical epidemiology (including site surveys, ethnographic studies and acute toxicity studies);
- (3) Demand reduction (including prevention, treatment, harm reduction, reintegration and clinical treatment research);
- (4) Supply, supply reduction and crime;
- (5) Drug policy (including laws, economic issues and strategies);
- (6) Other topics.

If it is not possible to identify the main drug-related on-going studies/research projects in your country, please provide a list of the most relevant current bibliographic references.

Since 2022, the scope of public research funding has been extended to so-called substance-free addictions (screens, gambling and video games) by Article 84 of [Law no. 2021-1754 of 23 December 2021](#) relating to the Social Security financing for 2022. This expansion aims to respond to the concerning reports of problematic uses observed in recent years, mainly among adolescents and young adults.

The information currently collated concerning the efforts devoted to research is set out below.

In 2022, the FLCA financed 50 research projects supported by INCa (National Cancer Institute) and IReSP (Institute for Public Health Research) in many disciplines (neurosciences, epidemiology, public health, economics, social sciences, etc.) for an amount of €11.4 million. The complete list of the projects is available in the websites of the Inca and the Iresp.

Among the projects funded in 2022, the FLCA has funded 9 doctorates on addiction.

In total, more than 175 research projects have been funded, for about €45,4 million since 2018. This commitment now puts France in 7th place among countries with the highest scientific production on addictions.

In particular, the following were completed in 2022: 14 research projects including two theses. Let us cite the Impli-MG-TUO project "Understanding changes in the involvement of general practitioners in the primary care management of patients with opioid use disorder" and the PATTERN project "Preventing the intergenerational transmission of addictive behaviours: intervention research within the framework of the programme *"Une affaire de famille !/A family affair!"* ".

Moreover, improving knowledge of the illicit supply of drugs is one of the priorities of the national plan to combat drugs (Ministère de la Justice *et al.* 2019) jointly led by the Ministry of Justice, the Ministry of the Interior and the Ministry of Action and Public Accounts.

In 2022, MILDECA financed (on its own or via the Fund for Combating Addiction) 9 research projects for a total of € 1.1 million, including the PIRALAD program (Interministerial Applied Research Programme to Combat Drugs) with a 2022 budget of € 520 000. Initiated in 2021 in close partnership with the administrations involved in the fight against illicit drug trafficking (Police, *Gendarmerie*, Customs, Justice) (see WB 2022), the PIRALAD research program has funded EFAMAC research project on the supply of cannabis and other drugs, as well as ECODROGUE (ethnological and historical research on the evolution of drug trafficking in a Marseille district). This research program also funded the continuation of the international research on "the effects of illicit drug production on the environment", in partnership with the UNODC, published in the *World Drug Report* in June 2022 (UNODC 2022).

MILDECA is also expanding its actions aimed at scientific evaluations, such as for:

- a) "evaluation of the experimental LIMITs trafficking prevention programme" (2020-2024) and
- b) "evaluation of problem-solving justice programmes in France" (2022-2024).

In addition, since its creation in 2019, the FLCA has funded specific OFDT research projects to the tune of nearly € 1 200 000. Almost all of these projects take place over several years. In 2022, a budget of € 686 500 has funded the continuation of 7 projects already started in 2021 (see WB 2021) and the launch of 5 new studies:

- ESSPRI (*Enquête sur la santé et les substances en prison/Survey on health and substances in prison*), aiming to better assess the consumption of inmates.
- TUPSALCO (*Trajectoires d'usages et parcours de soin : regards croisés des professionnels et des usagers d'alcool/Trajectories of use and treatment pathways: the differing perspectives of professionals and alcohol users*), a survey aimed at putting into perspective the trajectories of consumption and the provision of care offered to patients seen in withdrawal, aftercare or primary care settings.
- NOVURC (*Nouveaux visages des usagers du cannabis/New faces of cannabis users*), a survey aimed at describing and understanding the practices of adult (26-64 years old) regular cannabis users, their history of use, trajectories and lifestyles.
- CIPPAL (*Comparaison internationale des politiques publiques de contrôle de l'accès, de la vente et du marketing alcool/ International Comparison of Public Policies for Controlling the Attractiveness and Accessibility of Alcohol*) a survey aimed at drawing up an inventory of the legislation and conditions of access to the supply of alcohol.
- EROPP (*Enquête sur les représentations, opinions et perceptions sur les psychotropes/Survey on representations, opinions and perceptions regarding psychoactive drugs*) has two main objectives: 1/ to measure changes in the French population's opinions of psychoactive substances and their users over the past 25 years, and 2/ to document social representations of issues currently being debated in the public arena (legalization of cannabis, perception of risks associated with alcohol, tobacco and cannabis consumption, legislation on various psychoactive substances, etc.).

Furthermore, in 2022, 3 other clinical research projects were funded under the PHRC programme. They deal with 1/ the impact of an addictology intervention in liver transplant patients (AddictoLive), 2/ the efficacy and tolerability of cannabidiol in patients with severe pruritus (CANNABITCH) and 3/ the use of light therapy during inpatient cocaine withdrawal (CokeLux).

The total number of scientific publications on addiction published in 2022 up to the first quarter of 2023 equals 202, of which:

- Publications on addiction: 31
- Publications on cannabis: 42
- Publications on cocaine: 14
- Publications on opioids: 16
- Publications on NPS: 14
- Publications on several products: 76
- Publications on other substances: 9

Bibliography 2022-1st quarter 2023

T4. Additional information

The purpose of this section is to provide additional information important to drug-related research in your country that has not been provided elsewhere.

T4.1. **Optional.** Please describe any additional important sources of information, specific studies or information on drug-related research priorities. Where possible, please provide references and/or links.

T4.2. **Optional.** Please describe any other important aspect of drug-related research that has not been covered in the specific questions above. This may be additional information, a reference to an organisation in your country that monitors national drug-related research, the availability of a bibliography of recent studies or new areas of specific importance for your country.

T5. Sources and methodology

The purpose of this section is to collect sources and bibliography for the information provided above, including brief descriptions of studies and their methodology where appropriate.

T5.1. Please list notable sources for the information provided above.
